                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edudocs/Genbank draft data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in his sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ä

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:23608101.

The sequence in this assembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence and sequence an

oct Submission iitted (23-APR-2002) Genome Center, University of Washington, 352145, Seattle, WA 98195, USA yr 23, 2002 this sequence version replaced gi:17027297. Center: Genome Center Center: University of Washington Genome Center Web site: http://www.ashington.edu Contact: uwgchcgs@u.washington.edu Drafting Center: BCM Drafting Center: BCM Center project Information Center project Information Center project name: chora.	Center close name: RP11-852E15 (bc0572)	nlit m. qua sss risi	This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. Sequence Validation: This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The sequence has been validated by multiple Complete Digest fragments with sequence-predicted fragments is given below. The electronically digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.                                                                                                                         This represents a rodent chemokine receptor 941D12 nucleotide sequence. The invention provides novel primate and rodent chemokines and chemokines are receptors. The chemokines, receptors and binding compounds (Optionally antibodiess/fragments specifically binding the chemokines) are useful the chemokines as sociated with abnormal physiology or development e.g. inflammatory conditions such as sathma. Chemokines are important in immune and inflammatory responses in that they induce lewiportant in immune and inflammatory responses in that they induce lewiportant in immune and inflammatory responses in that they induce lewiportant in immune and inflammatory responses in that they induce several cells involved in inflammation and can induce other biological responses e.g. modulation of second messenger levels (e.g. Ca++).

CC cellular morphology modification responses, phosphoinositide lipid turnover, possible antiviral responses etc. The chemokine receptors of turnover, possible antiviral responses, phosphoinositide lipid turnover, possible antiviral responses to The chemokine receptor polypeptides are useful to produce involve chemical antagonists which block complex production or utilise competitive binding. Binding compounds identified (agonists or network macrophages or lymphocytes) to treat e.g. abnormal produce antabodies useful diagnostically, for drug screening produce probes for detecting the polyputcleotides are useful to produce antabodies useful diagnostically from other species. They also allow transformation of cells for polypeptide production
Rodent and primate chemokines and chemokine receptors - useful diagnostically and therapeutically to treat conditions associated with abnormal physiology or development e.g. inflammatory conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1475 BP; 374 A; 346 C; 312 G; 443 T; 0 U; 0 Other;

```
This sequence encodes the human HBMBU14 protein of the invention. HBMBU14 is a human 7-transmembrane (TM) receptor. The products can be used for treating or preventing conditions related to abnormal HBMBU14 expression or activity, e.g. infections such as bacterial, fungal, protozoan and viral infections especially infections caused by HIV-1 and HIV-2, pain, cancers, anorexa's pullimia, asthma, parkinson's disease, acute heart failure, atherosclerosis, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allorates, including anxiety, schizophrenia, manic depression, delirium, dementia or severe mental retardation, and dyskinesias, such as Huntington's disease or Gilles de la Tourette's syndrome. The products can also be used for diagnosing a disease or susceptibility to a disease related to the expression of HBMBU14 and for identifying compounds which indice to and activate or inhibit a receptor for the polypeptide

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular of protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or anticity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. (I) can be used as GPCRs modulators and in gene therapy. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for corresponding GPCRs. The antigenic peptides for treating immune-related diseases, immunological-related cell proliferative cipenation immune diseases, immunological-related cell proliferative diseases, or autoimmune diseases, eg. ALDS, Alzheimer's disease, atterations, allergies, Crohm's disease, practicions, allergies, Crohm's disease, practicions, allergies, Crohm's disease, giabletes, graft versue host cinflammation, allergies, cancer, cardiomyopathy, chronic and acute inflammation, allergies, moltiple sclerosis, pain, pscriasis, cancer, depression, schizophrenia, dementia, mental retardation, memory correspondersion, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis ABP22523 to ABP2269 encode GPCR proteins given in ABP81018, which are used in the exception of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TICAGCAGTITCAATGACAGCAGGAGGAGCATCAAGACTICCTGCAGTICAGCAAG

The STRL33 polypeptide is a fusion accessory factor that can function with CD4 to mediate fusion with cells bearing HIV-1 env from both laboratory-adapted TCL-cropic variants and from M-tropic variants. Agents that suppress STRL33 can be used in a method to treat HIV-related disorders. The products and methods can be used for the study, prevention and therapy of HIV-related disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     197

This cDNA clone codes for pig-tailed macaque Bonzo (see AAW97785), a novel HIV/SIV translocation promoting agent that acts in conjunction with code to serve as a receptor for the entry into.a cell of a virus having a specific viral envelope glycoprotein. Bonzo is a member of the 7-transmembrane G-protein coupled receptor family, is closely related to transmembrane G-protein coupled receptor family, is closely related to the chemokine receptor family, and is expressed in lymphoid tissues. The invention provides the amino acid sequences (see AAW97783-88) and DNA sequences (see AAW97783-88) and DNA sequences (see AAW97783-88) and DNA sequences covel receptors were identified using an expression promoting agents. They were found to be used by particular strains of HIV-2 and retopic HIV-1. The invention also includes: mammalian cells transfected with Bonzo and/or Bob and human CD4, which can be used to Screen potential therapeutic agents and identify ligands, antibodies to Bonzo, which can be used therapeutically, e.g. as antagonists or to target to taxing or radioisotopes to HIV-permissive cells; transgenic animals; and antisense and ribozyme molecules, which may also be used therapeutically, generally antisense and ribozyme molecules, which may also be used therapeutically.
                                                                                                                                                                                          New nucleic acid encoding the human translocation promoter Bonzo - use
to screen for potential agents for treating acquired immune deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1029 BP; 230 A; 278 C; 236 G; 285 T; 0 U; 0 Other;

The sequence encodes a novel SIV (Simian immunodeficiency virus) translocating agent, Bonzo. The invention relates to selecting an agent that may be used in treating acquired immunodeficiency syndrome (AIDS) comprises administering a potential therapeutic agent to a cell expressing human CD4 and primate Bonzo or BOB (Brother of Bonzo), contacting the cell with a virus pseudotyped with an HIV envelope glycoprotein, and measuring the cell's ability to resist infection. The method is useful for selecting or identifying an agent, which can be used in treating AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
Identifying an agent for treating AIDS comprises administering a potential therapeutic agent to a cell expressing human CD4 and primate Bonzo or BOB and contacting the cell with a virus pseudotyped with an HIV envelope glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      118 ACTACGAGGGAGATTTCTGGCTCTTCAACAATTCCAGTGATAACAGCCAGGAGAACAAAC 177
